

## Manufacturing Process Engineer

Grundfos is a Danish company that is a global leader in innovative water pump solutions. We believe that innovation is not just a business opportunity but an obligation. What truly matters is not only short-term profit but the impact we leave on the world. By becoming part of the Grundfos team, an individual can contribute to our goals and leave their mark, regardless of their role in the company.

### Tasks and responsibilities:

- Responsible for production line or production area.
- Control production activities, such as SOP, PDM, Control plan, PFMEA, and ensure compliance of standards.
- Preparation of production and process documentation according to Grundfos standard (SOP)
- Plan and execute investments
- Use of IMS in performing their tasks, and for the proper functioning of the integrated management system.
- Follow and develop according to GPS

### Requirements:

- M.Sc. or Bachelor's Degree in Engineering.
- Experience within defined processes within production development.
- Knowledge of the plans, processes and activities within the functional area in production development.
- Possess a great understanding of the relevant systems, local laws and regulations where applicable, for the production development area.
- Familiar with relevant IT tools
- English language required, high level written and spoken

### We offer:

- Professional development through education and training in international company
- Provided meal within canteen
- Covered travel expenses
- Additional benefits

We are looking forward to collaborating with you! If interested, kindly send your CV to [grundfoscareersrbia@grundfos.com](mailto:grundfoscareersrbia@grundfos.com)
